DETAILED ACTION

Introduction

1. The terminal disclaimer filed on September 23, 2004 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent Number 6,681,946 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 24, 25, 27 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schmidt (U.S. 4,412,623) in view of Ida et al. (U.S. 6,042,850). Schmidt teaches a resealable transfer set comprising a general tubular elastomeric fluid transfer valve member 4, and a piercing member 3. Schmidt does not disclose that the slit is biased to a closed position. Ida et al. teaches that it is known to provide a valve member with an opening which is biased to a closed position (see col. 4 line 32). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the transfer set of Schmidt with the opening 41 being biased to a closed position, as taught by Ida et al., in order to aid in preventing unintentional escape of the contents.

Allowable Subject Matter

4. Claims 26, 28-30, 32 and 33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments filed September 23, 2004 have been fully considered but they are not persuasive. Applicant argues that the Schmidt teat hole vents the container and therefore cannot be modified by the self sealing hole of Ida et al. The examiner disagrees with this position. It is not necessary for the hole of the Schmidt teat to vent the bottle. It is well known in the art that vents can be placed in the container sidewalls or bottom wall to aid dispensing of the contents. These vents are normally closed and open in response to vacuum pressure built up in the bottle. For this reason, it is possible to modify the Schmidt closure without changing the principle operation of the closure.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
